Global Equity Observer Driving quality

INVESTMENT INSIGHT | INTERNATIONAL EQUITY TEAM | February 2024

As a team, we've spent the last quarter of a century seeking out what we consider to be the world's best compounders. These are companies that we believe can continue to steadily—and organically—grow their earnings and free cash flows at an attractive rate over the long term.

Compounding is a powerful force. Grow \$1,000 at 10% over seven years and you will have doubled your money. Continue for another 10 years and you'll have \$6,000.

We have two principal tasks. One is finding the compounders. The second is striving not to overpay. If a company is too expensive, then it is too expensive—and you run the risk of the price receding to a fair and sensible level. The recently departed Charlie Munger famously said, "A great business at a fair price is superior to a fair business at a great price." We agree. In his inimitable style, Munger also said, "If you buy something because it is undervalued, then you have to think about selling it when it approaches your calculation of intrinsic value. That's hard. But, if you can buy a few great companies, then you can sit on your *** That's a good thing." Here, we are less inclined to agree. The truth is, you can't just sit and watch—it is essential to check and check again that the compounding potential is intact and not under threat, that there's no risk of fade of returns, and that the valuation remains reasonable. That's a challenge we meet with rigorous fundamental analysis and company engagement.

What tells us a company might be a high quality compounder? There are two measures that are part of our quantitative screen: the first is return on operating capital employed (ROOCE), and the second gross margin. ROOCE isn't a measure readily found in FactSet or Bloomberg screening tools; even if you Google it, the search will likely default to ROIC (return on invested capital). Yet ROOCE isn't an invention of ours. It is a subset of ROIC, which is also an important measure; it includes goodwill and accounts for past capital allocation decisions. Essentially, what ROOCE tells us is how much incremental capital is required to grow a business. Using a car analogy, if we think of ROIC as the quality of the car engine plus the driver's historical capability, ROOCE is the quality of the car engine alone. AUTHORS

BRUNO PAULSON Managing Director

ALISTAIR CORDEN-LLOYD Executive Director

"Our analysis shows that high-ROOCE companies have had a better annualised long-term return than low-ROOCE companies." Historically, our analysis shows that high-ROOCE companies have had a better annualised long-term return than low-ROOCE companies. Using 20 years of data from the MSCI World Index and dividing the constituents into five buckets, split highest to lowest by ROOCE, the highest ROOCE bucket returns 10.5% on an annualised basis, followed by returns of 10.2%, 9.5%, 8.5% and finally 7.5% for the lowest bucket.¹ At first glance, the spread might not seem that wide. But if we think of it in terms of compounding, \$1,000 for 10 years at 10.5% rather than 7.5% results in \$2,456 instead of \$1,917—nearly 30% more. Compounding matters.

ROOCE explained

ROOCE is made up of two distinct parts. The return component of ROOCE, the "RO", is from a company's profit and loss account—specifically the EBIT (earnings before interest and taxes). Meanwhile, the operating capital employed piece, the "OCE", comes from the balance sheet and is the sum of the net value of the company's property, plant and equipment, plus its inventory, along with the trade working capital (the net of debtors and creditors). The best way to achieve a high ROOCE is to have a high level of profitability for the "RO" and a limited need for operating capital. Companies that exhibit these characteristics are therefore typically high-margin, assetlight operations.

Why high and stable gross margins matter

When we look for high margins, we're after high gross margins. Companies with a relatively limited cost of goods tend to have high gross margins and therefore high gross profits. Performing the same exercise for gross margin as we did for ROOCE, we split the MSCI World Index constituents into buckets from highest to lowest gross margin. The results are remarkably similar, with the highest gross margin bucket producing the highest annualised 20-year return (+11.5%), and the lowest gross margin bucket producing the lowest return (+8.5%).²

Essential in the context of high gross margins is pricing power, regardless of whether a company is facing an inflationary, disinflationary or deflationary environment. Pricing power means a company is able to pass on input cost inflation to customers. Should input costs then recede, pricing power enables these companies to hold on to the higher pricing. This is reflected in the longterm stability of high gross margins. In other words, a company can't sustain a high gross margin if it doesn't have pricing power. Returning to our car analogy, high gross profits might be thought of as the fuel needed to run the engine—the force behind the organic growth. The greater a company's gross profit, the more it can spend on operating costs to organically drive revenues. These operating costs are typically talent (the workforce), research and development (R&D) and marketing. They help power the sustainability of long-term ROOCE, keeping the company and its brands, networks, products and services relevant to its customers, be they consumers or businesses. High gross margins also mean that a company is less vulnerable to any rise in cost of goods, which lower the percentage of revenues.

The average company in the MSCI World Index, represented by the index itself, has a 30% gross margin and a 20% EBITDA margin (earnings before interest, taxes, depreciation and amortization).² In between these two lie the operating costs. To put some numbers on this, if the average company had, for example, \$20 billion of sales, using the average gross margin and EBITDA margin referenced above, \$20 billion x 30% = \$6 billion of gross profit, and \$20 billion x 20% = \$4 billion of EBITDA. With a difference of \$2 billion between the two, that means 10% of these sales are operating costs. One of our high quality companies, a U.S.-based household products and personal care company with global operations and a host of world-leading brands, has a 50% gross margin and a 26% EBITDA margin. That's more than twice the average company's spend and investment on hiring talent, along with innovating, marketing and advertising at much greater intensity—overall, it's a substantial advantage.

We focus on ensuring that company management is efficiently driving operating costs and on understanding how they might allocate cash flows and possibly use the balance sheet (cash and debt) for acquisitions. As we discussed in our June 2023 issue, "To buy or not to buy", we are not averse to acquisitions; but if they come at the cost of reducing ROOCE, we believe it may signal that company management has misallocated capital and has potentially—and possibly permanently—diluted the quality of the whole company by buying a lower quality business. This is aside from the issue of overpaying, which is also discussed in our June 2023 piece.

Perversely, an improving ROOCE could also be a red flag to watch for, just as much as a decline. In the short term, higher ROOCE can easily be achieved simply by cutting operating costs, such as reducing R&D or marketing expenses. Profits rise, but in the long term the sustainability of organic growth at the revenue line will be challenged due to the underinvestment. The business will likely slow, and its intrinsic value might decline.

The investment road is very long. We don't need an ontrend, flashy sports car to whizz from A to B, or to go too fast and then run out of fuel. And we're not taking our chances on a cheap and cheerful runabout either. We're looking for reliable, sensible cars with decent performance that won't let us down, that don't cost a fortune to run and aren't complicated to drive; in short, cars we're happy to ride in for a very long time—on the right road, in all weathers. Existing high ROOCE and gross margins indicate which companies to look at closely. However, most of our research effort is spent understanding whether these measures will both remain high given all the challenges firms face—whether due to competitors, disruptors, regulators, fashions or economic cycles—when continuing to grow at high profitability. After all (and with apologies to Thomas Jefferson), "the price of compounding is eternal vigilance."

Risk Considerations

There is no assurance that a portfolio will achieve its investment objective. Portfolios are subject to market risk, which is the possibility that the market value of securities owned by the portfolio will decline. Market values can change daily due to economic and other events (e.g. natural disasters, health crises, terrorism, conflicts and social unrest) that affect markets, countries, companies or governments. It is difficult to predict the timing, duration, and potential adverse effects (e.g. portfolio liquidity) of events. Accordingly, you can lose money investing in this strategy. Please be aware that this strategy may be subject to certain additional risks. Changes in the worldwide economy, consumer spending, competition, demographics and consumer preferences, government regulation and economic conditions may adversely affect global franchise companies and may negatively impact the strategy to a greater extent than if the strategy's assets were invested in a wider variety of companies. In general, equity securities' values also fluctuate in response to activities specific to a company. Investments in foreign markets entail special risks such as currency, political, economic, and market risks. Stocks of small- and mid-capitalisation companies carry special risks, such as limited product lines, markets and financial resources, and greater market volatility than securities of larger, more established companies. The risks of investing in emerging market countries are greater than risks associated with investments in foreign developed markets. Derivative instruments may disproportionately increase losses and have a significant impact on performance. They also may be subject to counterparty, liquidity, valuation, correlation and market risks. Illiquid securities may be more difficult to sell and value than publicly traded securities (liquidity risk). Non-diversified portfolios often invest in a more limited number of issuers. As such, changes in the financial condition or market value of a single issuer may cause greater volatility. **ESG strategies** that incorporate impact investing and/or Environmental, Social and Governance (ESG) factors could result in relative investment performance deviating from other strategies or broad market benchmarks, depending on whether such sectors or investments are in or out of favor in the market. As a result, there is no assurance ESG strategies could result in more favorable investment performance.

DEFINITIONS

Earnings Before Interest, Taxes, Depreciation and Amortization (EBITDA)

is essentially net income with interest, taxes, depreciation, and amortization added back to it, and can be used to analyze and compare profitability between companies and industries because it eliminates the effects of financing and accounting decisions.

The **MSCI World Index** is a free float adjusted market capitalization weighted index that is designed to measure the global equity market performance of developed markets. The term "free float" represents the portion of shares outstanding that are deemed to be available for purchase in the public equity markets by investors. The performance of the Index is listed in U.S. dollars and assumes reinvestment of net dividends.

Return On Invested Capital (ROIC) represents the rate of return a company makes on the cash it invests in its business.

Return On Operating Capital Employed (ROOCE) is a ratio indicating the efficiency and profitability of a company's trade working capital. Calculated as: earnings before interest and taxes/property, plant and equipment plus trade working capital (ex-financials and excluding goodwill).

IMPORTANT INFORMATION

There is no guarantee that any investment strategy will work under all market conditions, and each investor should evaluate their ability to invest for the long-term, especially during periods of downturn in the market.

A separately managed account may not be appropriate for all investors. Separate accounts managed according to the particular Strategy may include securities that may not necessarily track the performance of a particular index. A minimum asset level is required.

For important information about the investment managers, please refer to Form ADV Part 2.

ASIA PACIFIC

Hong Kong: This material is disseminated by Morgan Stanley Asia Limited for use in Hong Kong and shall only be made available to "professional investors" as defined under the Securities and Futures Ordinance of Hong Kong (Cap 571). The contents of this material have not been reviewed nor approved by any regulatory authority including the Securities and Futures Commission in Hong Kong. Accordingly, save where an exemption is available under the relevant law, this material shall not be issued, circulated, distributed, directed at, or made available to, the public in Hong Kong. Singapore: This material is disseminated by Morgan Stanley Investment Management Company and should not be considered to be the subject of an invitation for subscription or purchase, whether directly or indirectly. to the public or any member of the public in Singapore other than (i) to an institutional investor under section 304 of the Securities and Futures Act, Chapter 289 of Singapore ("SFA"); (ii) to a "relevant person" (which includes an accredited investor) pursuant to section 305 of the SFA, and such distribution is in accordance with the conditions specified in section 305 of the SFA; or (iii) otherwise pursuant to, and in accordance with the conditions of, any other applicable provision of the SFA. This publication has not been reviewed by the Monetary Authority of Singapore. Australia: This material is provided by Morgan Stanley Investment Management (Australia) Pty Ltd ABN 22122040037, AFSL No. 314182 and its affiliates and does not constitute an offer of interests. Morgan Stanley Investment Management (Australia) Pty Limited arranges for MSIM affiliates to provide financial services to Australian wholesale clients. Interests will only be offered in circumstances under which no disclosure is required under the Corporations Act 2001 (Cth) (the "Corporations Act"). Any offer of interests

will not purport to be an offer of interests in circumstances under which disclosure is required under the Corporations Act and will only be made to persons who qualify as a "wholesale client" (as defined in the Corporations Act). This material will not be lodged with the Australian Securities and Investments Commission.

Japan

For professional investors, this material is circulated or distributed for informational purposes only. For those who are not professional investors, this material is provided in relation to Morgan Stanley Investment Management (Japan) Co., Ltd. ("MSIMJ")'s business with respect to discretionary investment management agreements ("IMA") and investment advisory agreements ("IAA"). This is not for the purpose of a recommendation or solicitation of transactions or offers any particular financial instruments. Under an IMA, with respect to management of assets of a client, the client prescribes basic management policies in advance and commissions MSIMJ to make all investment decisions based on an analysis of the value, etc. of the securities, and MSIMJ accepts such commission. The client shall delegate to MSIMJ the authorities necessary for making investment. MSIMJ exercises the delegated authorities based on investment decisions of MSIMJ, and the client shall not make individual instructions. All investment profits and losses belong to the clients; principal is not guaranteed. Please consider the investment objectives and nature of risks before investing. As an investment advisory fee for an IAA or an IMA, the amount of assets subject to the contract multiplied by a certain rate (the upper limit is 2.20% per annum (including tax)) shall be incurred in proportion to the contract period. For some strategies, a contingency fee may be incurred in addition to the fee mentioned above. Indirect charges also may be incurred, such as brokerage commissions for incorporated securities. Since these charges and expenses are different depending on a contract and other factors, MSIMJ cannot present the rates, upper limits, etc. in advance. All clients should read the Documents Provided Prior to the Conclusion of a Contract carefully before executing an agreement. This material is disseminated in Japan by MSIMJ, Registered No. 410 (Director of Kanto Local Finance Bureau (Financial Instruments Firms)), Membership: the Japan Securities Dealers Association, The Investment Trusts Association, Japan, the Japan Investment Advisers Association and the Type II Financial Instruments Firms Association.
