

Caron's Corner: Higher Risk, but Lower Volatility? We Are Tapping on the Brakes. . .for Now

- Entering June we are headed into the dreaded 2nd half of the year, where economic activity is expected to slow – at least as far as the narrative goes.
- GDP should decelerate as the higher-for-longer policy strategy reaches a tipping point and the surprise factors that resulted in higher equity earnings are less likely to repeat in 2H24 – again, as the narrative goes.
- But markets aren't priced this way. Given that markets are forward-looking one would think that volatility would be rising sharply, but it's not. So what gives?
- We discuss in this audiocast.

Jim Caron: Hello, this is Jim Caron, CIO of the Portfolio Solutions Group. Higher risk, but lower volatility while we're starting to tap on the brakes, at least for now. As we enter June, we are reminded that we are headed into the dreaded second half of the year where economic activity is expected to slow. . .at least as the narrative would go. GDP should decelerate as the higher-for-longer policy strategy reaches a tipping point and the surprise factors that resulted in higher equity earnings are less likely to repeat themselves in the second half of 2024. Again, as the narrative goes. But the markets aren't priced this way. Given that markets are forward-looking, one would think that volatility would be sharply rising but it's not. So what gives? Let's get into it!

We think that interest rate volatility markets may hold the key to all of this. Central bank policy and interest rate markets have been very influential to the impact on asset prices broadly. Importantly, the consensus expectations still call for rate cuts. Perhaps the timing is in question with the ECB and the Bank of England expected to cut rates ahead of the Fed, perhaps over the next weeks or months. But the direction of policy rates is not in question, it's lower full-stop based on market expectations. Supporting this view have been some recently friendly inflation prints showing that the path to lower inflation, albeit bumpy, is still headed lower by conventional measures. Core PCE is running around 2.7% and euro area HICP inflation measures are also running around 2.5%. Of course, there are other measures of inflation that send a less clear message. But policymakers believe economic conditions are slowing and those other inflation measures are suffering from lagged effects. I suppose this is what's meant by a "bumpy path" for lower inflation. The net effect, however, is that bond yields became caught in a tight range which has the impact of collapsing bond volatility. One of the common measures of bond volatility is the MOVE index which has collapsed to around 83, marking the lowest levels since the response to Fed policy to suppress interest rates, post-COVID. Said differently, interest rates have at least for now removed themselves as a headwind to counter the upward surge in risky asset valuations. Unless something changes market expectations for interest rates to move higher, then risky assets can run unencumbered.

Turning to equity market volatility, we look at the VIX, a common measure of equity market volatility, which is running at low levels below 13, around 12. Certainly this has been supported by better than

expected economic fundamentals and stronger than expected earnings in the first half of 2024. And it's further bolstered by analysts taking up their equity forecasts for the remainder of 2024. But we can't forget that it's also supported by the low rate volatility in central bank policy, sometimes called the "Fed put." As we all know the Fed is itchy to cut rates at the first side of any stress.

Many other technicals and fundamentals are at work supporting equities as well. Many people are still underweight relative to their target allocations and equities. Fiscal stimulus plans are pulling forward spending and investing, the consumer remains strong, as do wages, which is keeping earnings and margins afloat. So maybe it's not all smoke and mirrors that these assets are doing well.

So why are we then tapping on the brakes? We were counter consensus when we started increasing equity exposure back in December of 2022 and kept adding it throughout 2023. So perhaps now we're also out of consensus as we start to move against the positive equity narrative. We did take our overweight in equity exposure to neutral, back starting in March and continue to do that in the second quarter of 2024. Why? Because our soft landing scenario that we held for over a year seems to be fully priced. In order to get further upside, we need to see an acceleration in economic activity and that's not our base case at the moment. However, we are neutral, *not* negative. So color me optimistic to be neutral at these valuations.

We are choosing to go into the U.S. election season unencumbered with a legacy view or fighting the tape. We mentioned before that we want to have dry powder and be able to evaluate market opportunities with a clear and open mind as they present themselves in the months ahead. Strategically, we do have an optimistic outlook but tacticals may be what makes the difference in the second half of 2024.

RISK CONSIDERATIONS

Diversification does not eliminate the risk of loss. There is no assurance that the Strategy will achieve its investment objective. Portfolios are subject to market risk, which is the possibility that the market values of securities owned by the portfolio will decline and that the value of portfolio shares may therefore be less than what you paid for them. Market values can change daily due to economic and other events (e.g. natural disasters, health crises, terrorism, conflicts and social unrest) that affect markets, countries, companies or governments. It is difficult to predict the timing, duration, and potential adverse effects (e.g. portfolio liquidity) of events. Accordingly, you can lose money investing in this portfolio. Please be aware that this strategy may be subject to certain additional risks. There is the risk that the Adviser's **asset allocation methodology and assumptions** regarding the Underlying Portfolios may be incorrect in light of actual market conditions and the Portfolio may not achieve its investment objective. Share prices also tend to be volatile and there is a significant possibility of loss. The portfolio's investments in **commodity-linked notes** involve substantial risks, including risk of loss of a significant portion of their principal value. In addition to commodity risk, they may be subject to additional special risks, such as risk of loss of interest and principal, lack of secondary market and risk of greater volatility, that do not affect traditional equity and debt securities. **Currency fluctuations** could

erase investment gains or add to investment losses. **Fixed-income securities** are subject to the ability of an issuer to make timely principal and interest payments (credit risk), changes in interest rates (interest-rate risk), the creditworthiness of the issuer and general market liquidity (market risk). In a rising interest-rate environment, bond prices may fall and may result in periods of volatility and increased portfolio redemptions. In a declining interest-rate environment, the portfolio may generate less income. **Longer-term securities** may be more sensitive to interest rate changes. **Equity and foreign securities** are generally more volatile than fixed income securities and are subject to currency, political, economic and market risks. Equity values fluctuate in response to activities specific to a company. Stocks of **small-capitalization companies** carry special risks, such as limited product lines, markets and financial resources, and greater market volatility than securities of larger, more established companies. The risks of investing in **emerging market** countries are greater than risks associated with investments in foreign developed markets. **Exchange traded funds (ETFs)** shares have many of the same risks as direct investments in common stocks or bonds and their market value will fluctuate as the value of the underlying index does. By investing in exchange traded funds ETFs and other **Investment Funds**, the portfolio absorbs both its own expenses and those of the ETFs and Investment Funds it invests in. Supply and demand for ETFs and Investment Funds may not be correlated to that of the underlying securities. **Derivative instruments** can be illiquid, may disproportionately increase losses and may have a potentially large negative impact on the portfolio's performance. A **currency forward** is a hedging tool that does not involve any upfront payment. The use of **leverage** may increase volatility in the Portfolio.

IMPORTANT DISCLOSURES:

Past performance is no guarantee of future results. The returns referred to in the audio are those of representative indices and are not meant to depict the performance of a specific investment.

There is no guarantee that any investment strategy will work under all market conditions, and each investor should evaluate their ability to invest for the long-term, especially during periods of downturn in the market.

A separately managed account may not be appropriate for all investors. Separate accounts managed according to the particular Strategy may include securities that may not necessarily track the performance of a particular index. Please consider the investment objectives, risks and fees of the Strategy carefully before investing. A minimum asset level is required.

For important information about the investment managers, please refer to Form ADV Part 2.

ASIA PACIFIC

Hong Kong: This material is disseminated by Morgan Stanley Asia Limited for use in Hong Kong and shall only be made available to “professional investors” as defined under the Securities and Futures Ordinance of Hong Kong (Cap 571). The contents of this material have not been reviewed nor approved by any regulatory authority including the Securities and Futures Commission in Hong Kong. Accordingly, save where an exemption is available under the relevant law, this material shall not be issued, circulated, distributed, directed at, or made available to, the public in Hong Kong. **Singapore:** This material is disseminated by Morgan Stanley Investment Management Company and should not be considered to be the subject of an invitation for subscription or purchase, whether directly or indirectly, to the public or any member of the public in Singapore other than (i) to an institutional investor under section 304 of the Securities and Futures Act, Chapter 289 of Singapore (“SFA”); (ii) to a “relevant person” (which includes an accredited investor) pursuant to section 305 of the SFA, and such distribution is in accordance with the conditions specified in section 305 of the SFA; or (iii) otherwise pursuant to, and in accordance with the conditions of, any other applicable provision of the SFA. This publication has not been reviewed by the Monetary Authority of Singapore. **Australia:** This material is provided by Morgan Stanley Investment Management (Australia) Pty Ltd ABN 22122040037, AFSL No. 314182 and its affiliates and does not constitute an offer of interests. Morgan Stanley Investment Management (Australia) Pty Limited arranges for MSIM affiliates to provide financial services to Australian wholesale clients. Interests will only be offered in circumstances under which no disclosure is required under the Corporations Act 2001 (Cth) (the “Corporations Act”). Any offer of interests will not purport to be an offer of interests in circumstances under which disclosure is required under the Corporations Act and will only be made to persons who qualify as a “wholesale client” (as defined in the Corporations Act). This material will not be lodged with the Australian Securities and Investments Commission.

Japan: For professional investors, this material is circulated or distributed for informational purposes only. For those who are not professional investors, this material is provided in relation to Morgan Stanley Investment Management (Japan) Co., Ltd. (“MSIMJ”)’s business with respect to discretionary investment management agreements (“IMA”) and investment advisory agreements (“IAA”). This is not for the purpose of a recommendation or solicitation of transactions or offers any particular financial instruments. Under an IMA, with respect to management of assets of a client, the client prescribes basic management policies in advance and commissions MSIMJ to make all investment decisions based on an analysis of the value, etc. of the securities, and MSIMJ accepts such commission. The client shall delegate to MSIMJ the authorities necessary for making investment. MSIMJ exercises the delegated authorities based on investment decisions of MSIMJ, and the client shall not make individual instructions. All investment profits and losses belong to the clients; principal is not guaranteed. Please consider the investment objectives and nature of risks before investing. As an investment advisory fee for an IAA or an IMA, the amount of assets subject to the contract multiplied by a certain rate (the upper limit is 2.20% per annum (including tax)) shall be incurred in proportion to the contract period. For some strategies, a contingency

fee may be incurred in addition to the fee mentioned above. Indirect charges also may be incurred, such as brokerage commissions for incorporated securities. Since these charges and expenses are different depending on a contract and other factors, MSIMJ cannot present the rates, upper limits, etc. in advance. All clients should read the Documents Provided Prior to the Conclusion of a Contract carefully before executing an agreement. This material is disseminated in Japan by MSIMJ, Registered No. 410 (Director of Kanto Local Finance Bureau (Financial Instruments Firms)), Membership: the Japan Securities Dealers Association, The Investment Trusts Association, Japan, the Japan Investment Advisers Association and the Type II Financial Instruments Firms Association.
